VEHICLE FIRE SUPPRESSION SYSTEMS

MODEL BDS DRY CHEMICAL SYSTEM

VEHICLE FIRE SUPPRESSION

The need for Automatic Vehicle Fire Protection

The most important consideration in the selection and installation of automatic vehicle fire protection is the safety of the passengers and the operator of the vehicle. Industrial and commercial vehicles are plagued with potential fire hazards. Therefore, the danger of vehicle fire is constant. Since all vehicles carry a combination of highly combustible fluids including fuel, oils, grease, lubricants, hydraulic fluid, and ignition sources such as turbochargers, exhaust manifolds, electrical circuits, and batteries – **fire can start quickly.**

PRIMARY SOURCES OF VEHICLE FIRE:

- Short circuits, broken or worn electrical wires
- Vehicle Alternator/Generator Failure
- Turbocharger Failure
- Build-up of Class A Debris on engine, exhaust or other hot surfaces
- Hydraulic system leak can atomize fluid onto hot turbochargers

ONCE A VEHICLE FIRE IS ESTABLISHED, THE FOLLOWING RESULTS ARE ALMOST A CERTAINTY:

- Equipment Damage
- Vehicle Downtime for Repair
- Personal Injury Liability
- Loss of a Revenue Producing Vehicle
- Damage to Adjacent Vehicles, Equipment, or Buildings

AMERICAN TRANSIT VEHICLE FIRE SUPPRESSION SYSTEMS

American Transit Safety Systems, Inc. specializes in pre-engineered automatic fire detection and suppression systems for heavy duty commercial, industrial, municipal, and military vehicle applications including on-road and off-road vehicles in rough service environments. The American Transit BDS Model Dry Chemical Systems are available with ABC Dry Chemical agent or Purple K agent.

American Transit Fire Suppression Systems are site specific and designed to protect hazard areas common to vehicles and mobile equipment:

- | | |
|------------------------------|-------------------------|
| ■ Vehicle Engine Compartment | ■ Hydraulic Pump Areas |
| ■ Coolant Heater Compartment | ■ AC Condenser Areas |
| ■ Particulate Trap Areas | ■ Electrical Cabinets |
| ■ Battery Boxes | ■ Generator Areas |
| ■ Aviation GPU | ■ Refrigeration Units |
| ■ Cargo Areas | ■ Fuel Filler/Tank Area |

SAFETY SYSTEMS, INC.

er - Manufacture

Vehicle applications include:

- Sanitation Trash Trucks
- Municipal Maintenance Vehicles
- Truck Tractor
- Intercity Coach Bus
- Aviation Support Equipment
- Agriculture Equipment
- Parcel Delivery Vehicles
- Military Transport
- Construction Vehicles
- Paratransit Vehicles

We also custom design automatic fire suppression systems for specific vehicle applications.

Wherever Potential Fire Hazard Exists!

NOTE: The images shown in this brochure are for illustration purposes only. Due to the wide variety of vehicle designs, options, and the intended use of the vehicle, American Transit Safety Systems, Inc. cannot pre-determine component location or overall system layout. Proper installation and maintenance is essential for designed system performance.
